About Me

A fast-moving and detail-oriented Information Systems graduate passionate about turning ideas into impactful digital solutions. I specialize in modern web and mobile development using React, Next.js, Vite, Laravel and Flutter — building scalable, high-performance applications with clean and structured code. With hands-on experience in AI-powered and Web3-based projects, I focus on delivering efficient results through thoughtful architecture and rapid execution. I thrive in dynamic environments, adapt quickly to new technologies, and bring a "builder's mindset" that values speed, precision, and meaningful innovation.

EDUCATION

Universitas Sam Ratulangi – Information Systems *2021 – 2025*

Thesis: Design of Android-Based Food Ordering Information System at RM. Solideo Kuliner

GPA 3.72/4.00

Relevant Coursework: Software Engineering, Database Systems, Web Programming, Artificial Intelligence, System Analysis & Design.

EXPERIENCES

Team Development Manager – Johan Garage *Bekasi, Indonesia | Present*

- Built Johan Garage's internal system from scratch to support workshop operations, marketplace workflows, warehouse tracking, and daily administration.
- Developed employee attendance, task coordination, and internal management tools to streamline operational processes.
- Led product planning and technical execution, translating business needs into reliable digital solutions.

Web3 Developer – Whealthy People (DeFi & Web3 Platform) *Remote | Sep 2024 – Present*

- Built and deployed DeFi features, including smart contract integration and token management workflows.
- Developed responsive frontend experiences using Next.js, React, and Vite with a focus on performance and usability.
- Implemented backend services with Next.js API routes and Supabase for real-time data handling and authentication.
- Collaborated on wallet integration, transaction flows, and decentralized application architecture.

Orders – Digital & Environmental Startup Team *Sep 2024 – Dec 2025*

- Core team member of Orders, a tech-driven startup offering services such as website and mobile app development, poster and branding design, and custom digital solutions.
- Actively involved in environmental tech projects, collaborating with eco-focused startups to build systems that support waste management, awareness campaigns, and sustainability platforms.
- Exploring the IoT space to integrate sensor-based technology into environmental monitoring and smart system development.

PPK Ormawa – Community Empowerment Program *July 2024 – Dec 2024 (Desa Kolongan)*

- Participated in the Program Penguatan Kapasitas Ormawa (PPK Ormawa), focusing on empowering rural communities through sustainability initiatives.
- Led the development of a community waste bank to help residents manage and monetize their household waste effectively.
- Educated locals on waste sorting, recycling, and digital tracking of recyclable materials to encourage long-term behavioral change.

Interests and Talents Department – HIMSIFOR UNSRAT *Mar 2023 – 2024*

- Facilitates skill development and provides resources for members to explore their talents
- Organizes events, workshops, and talent showcases related to members' hobbies and skills

PROJECT EXPERIENCES

ClimaSense AI – Intelligent Weather Forecasting Platform

Sep 2025

- Developed a full-stack weather forecasting platform using Next.js 16 (React 19) and TypeScript, integrating real-time JMA Global Forecast Model (via Open-Meteo API) with AI-powered weather analysis and 16-day predictive forecasting.
- Integrated OpenRouter LLM API (Grok-3.3) with weather context awareness system for intelligent weather analysis, automated alert generation, and natural language-based weather insights with location-specific customization.
- Implemented advanced geolocation system with multi-location support, Nominatim geocoding integration, and smart location caching with localStorage persistence for seamless location management across user sessions.
- Built comprehensive weather analytics dashboard with interactive Recharts visualizations, real-time environmental insights (air quality, UV index, precipitation), responsive design (mobile/desktop), and dynamic theme system with Framer Motion animations.

MEDAI – AI-Powered BPJS Claim Verification System

Nov 2025

- Developed a complete end-to-end claim verification system integrating OCR (3-stage extraction), structured data parsing, document validation, and automated AI-based analysis.
- Designed and implemented the AI risk scoring pipeline (Green/Yellow/Red) to detect approval readiness, fraud indicators, and medical completeness using rule-based + AI hybrid logic.
- Built an interactive dashboard showing live claim stats (total claims, approval rate, active cases), quick actions, and auto-generated claim previews for faster review.
- Implemented full claims lifecycle management—from upload, validation, AI analysis, final decisioning, to analytics (risk distribution, approval trends, processing time).

Orderly Hire° – AI-Powered CV Analysis Tool

July 2024 – Sep 2025

- Developed a full-stack recruitment platform using FastAPI (Python) and React 18 for automated CV screening and candidate analysis.
- Integrated Groq AI API (Llama 3.3-70B) for intelligent CV parsing, candidate scoring, and cultural fit assessment with company values customization.
- Implemented advanced location extraction system using NLP and AI inference, supporting universal geographical detection from CV content.
- Built comprehensive candidate management dashboard with search/filter capabilities, detailed analytics, and secure file upload validation.

CV Rindotama Perkasa – Company Website & Portfolio System

Oct 2025

- Built a modern company website using Next.js 15 with dynamic routing, SEO optimization, and responsive corporate UI.
- Integrated Supabase Database & Storage to manage product catalogs, project portfolios, and secure media assets.
- Implemented Supabase Auth and an admin dashboard for real-time content management with role-based access.
- Deployed scalable API routes for public product/project data delivery, ensuring fast performance and high uptime.

Karwanua – AI-Powered Climate Monitoring Platform

Oct 2025 – Present

- Developed a comprehensive full-stack climate monitoring platform using Next.js 15, React 19, and TypeScript, integrating real-time NASA satellite data (MODIS, NEO, GISS) for global environmental analysis.
- Implemented the Groq AI API with Llama 3.1 / 3.3 models to generate intelligent climate insights — including automated CO_2 emission analysis, NDVI vegetation health monitoring, and temperature anomaly detection with confidence scoring.
- Built an interactive geospatial visualization system using Leaflet and React-Leaflet, featuring 6+ NASA GIBS satellite layers for real-time climate mapping, urban-area detection, and regional comparison capabilities.
- Created an advanced analytics dashboard with Recharts for data visualization, analyzing regional emission trends across the Asia-Pacific and providing AI-powered carbon-offset recommendations.
- Project primarily focused on climate science and environmental analytics, emphasizing real-time data intelligence rather than recruitment or waste-management domains.

Tonsea Recycle Center (TRC) – Web3 Integrated Waste Management Website

Nov 2024 – July 2025

- Created a waste management platform using Laravel, allowing users to log waste, track recycling history, and manage submissions.
- Integrated Web3 Blockchain for tokenized transactions, ensuring transparent and immutable reward histories.
- Increased platform transparency and traceability, enabling real-time reward tracking

KawanuaVerse — AI-Powered Academic Research Analysis Platform

July 2025 – Present

- Developed a full-stack web application using Next.js 15 (React 19) and FastAPI (Python) for automated academic paper analysis, featuring AI-driven summarization and content extraction.
- Integrated xAI Grok 4 Fast via OpenRouter API to process academic PDFs intelligently, achieving 3–8 second analysis times with automatic title extraction, keyword identification, and relevance scoring.
- Built a comprehensive document management system with a drag-and-drop upload interface, real-time processing tracker, and SQLite database for storing analysis history and metadata.
- Implemented an interactive Q&A chat interface enabling context-aware, multi-turn conversations about uploaded research papers, while preserving conversation history.
- Created a modern, responsive dashboard with analytics, search functionality, and dark mode, designed using TypeScript, Tailwind CSS, and Framer Motion for smooth animations.

Sentiment Analysis News Website – AI-Powered Web App

June 2025

- Developed a web-based sentiment analysis platform using Laravel (frontend/backend) and Python (AI model), integrating Ollama and LLaMA 3 for natural language processing.
- Built an interactive dashboard displaying classified sentiment (positive, negative, neutral) from news articles, allowing users to track public opinion trends in real-time.

GUDANGKU Smart Inventory and Analytics Platform

June 2025

- Developed a full-stack medical supply management system using Angular 19 and Supabase, enabling automated inventory tracking, stock movement monitoring, and real-time reporting for healthcare facilities.

- Implemented an advanced analytics dashboard featuring dynamic statistics visualization with NgxNumberTickerComponent, including real-time stock levels, movement analytics, and automated low-stock alerts within a modern UI/UX design.
- Built a comprehensive modular system covering master data management, transaction processing, supplier management, and stock opname (inventory counting) with complete CRUD operations and audit trail functionality.
- Integrated real-time data synchronization using Supabase WebSocket subscriptions, supporting instant multi-user updates with role-based authentication and JWT security for reliable access control.

MatchaTime mobile App – Modern POS System for Café Management

Sep 2025 – Sep 2025

- Built a comprehensive Flutter-based Point of Sale (POS) system for Matchatime Café with real-time Firebase backend, featuring cross-platform compatibility and secure user authentication.
- Developed core business modules including intuitive cashier interface, real-time inventory management with low-stock alerts, role-based user access control, and automated sales analytics with PDF reporting.
- Enhanced user experience with Material Design 3 UI, smooth animations, search functionality, PDF receipt generation with WhatsApp sharing, and responsive layouts optimized for tablets and smartphones.

Tanah Nyiur Lestari – Environmental Startup Website

Nov 2024 – June 2025

- Developed an environmental awareness site using Django (Python) to promote sustainability and waste management education in Bitung City.
- Collaborated with local NGOs to build accessible content and resources.
- Enabled online community participation through event registration, article submission, and eco-pledge features.

Rakit Wisata Laut App – Marine Rental & Booking App

Mar 2025 – July 2025

- Built a Flutter-based mobile app for renting fishing and diving boats (rakit) in Malalayang Satu Timur.
- Includes booking management, real-time status tracking, and admin–user chat features.
- Supports local tourism by digitizing marine rental services for easier access and coordination.

RUSDI Mobile App – Digital Waste Bank

July 2024 – Nov 2024

- Developed an eco-themed waste management mobile app using Flutter, facilitating pickups, point redemption, and user scheduling.
- Introduced secure login via PIN and automated reminders, boosting daily engagement.

Food Ordering & Table Monitoring App in Solideo Kuliner – Mobile app

Dec *2024 – Apr 2025*

- Built a restaurant app in Flutter for real-time table monitoring and food ordering.
- Optimized restaurant queue and customer ordering flow.
- Reduced manual errors and improved overall customer experience.
- Helped 100+ users manage recyclable waste and earn points in early adoption phase.

Orders Website and mobile app – Startup Project

May *2025 – July 2025*

- Designed and deployed a startup platform using React JS and Flutter, providing services like financial management, note tracking, and client collaboration.

- Contributed to the eco-digital movement by aligning all tech features with sustainability goals and green UI/UX practices.
- Built and integrated the platform's data architecture using Next.js and Supabase, enabling real-time collaboration, secure authentication, and scalable API services.

Mobile Expense Tracker – Financial Calculator App

Apr *2025 – May 2025*

- Built a cross-platform mobile app with Flutter to help users manage and categorize daily expenses.
- Implemented chart-based summaries for monthly income vs. spending patterns.
- Enabled exportable financial reports

Capstone Project – RevoU Tech Academy (MSIB Kampus Merdeka)

Jan *2024 – July 2024*

- Created a sales analytics dashboard for a coffee shop using HTML, CSS, and JavaScript.
- Incorporated AI insights to track performance and trends.
- Delivered project as part of a team sprint under mentor evaluation.

AFC World Cup Qualifiers 2026 – Shot Map Visualization

May 2025

- Created shot map visualizations for the top 9 goal-scorers in the AFC 2026 qualifiers using Python and mplsoccer.
- Visuals include heatmaps, goal placement, xG, and SPA (Shot Placement Accuracy) for deeper performance insights.
- Designed team-branded player cards in a 3×3 grid layout for quick comparison and tactical analysis.

Library Management System – Laravel Project

Nov *2022 – Dec 2022*

Developed a book borrowing and return system with Laravel, featuring admin dashboards and user authentication.

BIFI App – 1000 Digital Startup Backend

Nov *2021 – Dec 2021*

Android app backend built with Android Studio for finding relaxing spots cofeeshop and placing orders. Won 🥉 3rd place in the competition.

COMMITTEE EXPERIENCES

- **RevoU Tech Academy: Learn Data Analytics & Software Development with AI Program Batch of February 2024**
  Feb 2024 – Jun 2024
  Selected as one of the participants in this intensive Kampus Merdeka x RevoU program focused on full-stack web development and data analytics enhanced by AI technologies Worked on a Capstone Project that built a web-based sales analytics dashboard for a fictional coffee shop using HTML, CSS, JavaScript, and integrated basic AI-driven insights. Collaborated in a cross-functional team simulating startup environments with real deadlines, weekly sprints, and mentor evaluations — sharpening both technical and soft skills such as teamwork, communication, and problem-solving.reative Design and Publisher, UNSRAT Information Systems students batch 2021
- **Orders – Startup Project Team** *2024 - 2025*
  Core team member of Orders, a digital startup focused on providing web app development, UI/UX design, and digital solutions. Actively involved in environmental innovation, Orders operates as an

eco-digital movement, building sustainable tech-based products to support environmental awareness and action.

- **PPK Ormawa – Program Penguatan Kapasitas ORMAWA** *2024*
  Member of the national student activity unit project focused on empowering village communities through digital solutions and sustainability initiatives.

ADDITIONAL

Language: English (Intermediate) , Bahasa Indonesia (Native)

Technical Skills:

- Python (Intermediate), PHP (Intermediate), JavaScript (Intermediate), Typescript, Dart (Intermediate), Java (Intermediate)
- Database Management: SQL (MySQL, SQLite, PostgreSQL), Supabase, Firebase, MongoDB (Intermediate)
- Web Development & Frameworks: HTML (Intermediate), CSS (Intermediate), React.js (Intermediate), Next.js (Intermediate), Vite (Intermediate), Vue.js (Intermediate), Laravel (Experienced), Django (Intermediate), CodeIgniter (Intermediate), Angular (Intermediate)
- Mobile Development: Flutter (Intermediate)
- Version Control & Deployment: Git, GitHub, Vercel, Railway, Netlify (Intermediate), Docker
- Other Tools & Technologies: RESTful APIs, JWT Authentication, WebSocket Integration, JSON, Node.js (Basic–Intermediate), Express.js, GIS Mapping (Leaflet), Data Visualization (Recharts)
